

Carriage Roller

Carriage Roller - Carriage rollers are specially designed bearings that are utilized on lift masts to be able to help them work in tough environmental surroundings. Lift masts are often subjected to shocks, oscillations, high dynamic and vibrations and static loads. This equipment is regularly exposed to environmental influences such as dust, cold, heat, aggressive ambient air, moisture and contamination. Thus, the guidance arrangements of lift masts have to be particularly robust and have a certain high load carrying capacity.

Carriage rollers have been created as the solution for operating in various environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts must be cost-effective and maintain operational security while having the ability to deal with a particularly high load carrying capacity.
